

RM PLATFORM

The European collaboration on Rapid Manufacturing

Rapid Manufacturing* (RM) contributes to strengthening the European economy and society.

- The RM platform intends to play a key role in structuring R&D activities at EU level to achieve a significant impact.
- RM platform facilitates strategic technology development for the coming years.

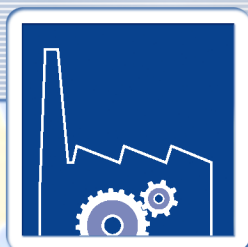

RM*: the use of a computer automated additive manufacturing process to reliably construct functional parts that are used directly as finished products or components.

- Companies, research and branch organisations cooperate and disseminate to the society at large.
- Everybody can benefit from the wide variety of info available on the website.
- You can also stay up to date by reading the newsletter.
- The platform offers a unique opportunity for its stakeholders to stay at the cutting edge of RM.
